Subject: Re: Corrected Version of URGENT Request Related to Chloroprene Monitor Removal
Attachments: Letter to R6 Administrator McQueen_final draft_Corrected.docx

Hi David,

In my haste to get the information to you, I inadvertently attached a version that included the incorrect description of the updated charts of 2017 - 2020 average chloroprene concentrations measured at 5th Ward Elementary School.

The following is the correct description for the updated results:

As shown in the following graph, between January 1, 2017 and May 29th, 2020 average concentrations at 5th Ward Elementary School only declined overall by 65.7% from the 2017 level. During the first 5 months of 2020, average concentrations increased by 51.8% to 1.70 $\mu\text{g}/\text{m}^3$, which is approximately 8.5 times higher than the 0.2 $\mu\text{g}/\text{m}^3$ EPA RfC.

The attached version of the draft letter contains the correct description of the updated charts.

Vickie

Hi David,

Attached is the final draft of the letter to Regional Administrator McQueen requesting the continued operation of the 6 chloroprene monitors based on evaluation of the performance of the proposed SPod sensors and the potential associated impacts on the health of 5th Ward Elementary School students and St. John residents.

Please let me know if you have questions or require additional information.

A formal request will be sent to Administrator McQueen later today.

Thank you for your continued support and have a great weekend!
Vickie Boothe
